EXPERIENCE

Sr. Software Architect

Bajaj Finserv Health

📅 Jan 2020 – Ongoing

📍 Pune

- Leading squad of Smart Reports and OCR with Agentic AI.
- An in-house DLS called **capsule** (design.bajajfinservhealth.in)
- Introduced **Micro-frontend** and **ArgoCD**
- Handled security concerns, including addressing DDoS attacks and SQL vulnerabilities.
- Implemented deployment optimizations resulting in an **80%** reduction in deployment time and a **99%** decrease in ACR size. These enhancements have led to significant cost savings and notable improvements in efficiency.
- Establishing coding guidelines and ensuring adherence to them throughout the organization.
- Introduced Next.js & re-architected the frontend
- Designed and developed reusable React hooks and components that have gained significant adoption across the organization.
- Took ownership of designing and developing B2C and Labs, starting from the initial concept and building them entirely from scratch.

Tech Lead & Full Stack

BigRadar

📅 April 2017 – Oct 2020

📍 Delhi

- Built a full-fledged application from scratch independently, striving to achieve industry standards and optimal performance despite limited resources.
- Developed a customized ORM solution for MongoDB and optimized a wrapper for Express.js, enhancing the efficiency and functionality of both technologies.

Sr. Software Engineer

Edunuts

📅 Aug 2015 – Apr 2017

📍 Delhi

Overseeing and enhancing the company's technology stack through the strategic selection of appropriate technologies and frameworks.

Tech Stack PHP Laravel Slim MySQL Node.js MongoDB

MY LIFE PHILOSOPHY

With 11+ years across backend engineering, cloud infrastructure, performance optimization, and developer tooling, I specialize in designing and implementing end-to-end solutions that scale.

MOST PROUD OF

Design Language System (Capsule)

Architected and development of Capsule — a scalable design system used across Bajaj Finserv Health products, achieved 99% lighthouse score.

Architecture

Built scalable cloud-native architectures (1M+ users), led microservices modernization, created full K8s + GitOps platforms, solved end-to-end engineering problems, and built widely-used open-source tools.

STRENGTHS

- Self-Taught & Passionate
- Open Source Contributor & Creative Technologist
- Tooling & Automation
- Technical Leadership
- Security-First Thinking
- DevOps & Deployment Optimization
- Deep understanding of scalable system architecture.
- Quick Learner - I can learn anything.

TECHNOLOGY

Frontend

TypeScript JavaScript React Next.js
Vue.js Socket.io WebRTC

Backend

Node.js Express.js Nest.js Objection.js
Mongoose PHP Laravel Slim

Styling & UI

CSS SASS Tailwind Bootstrap

DevOps / Cloud

Other Companies:

- Apka Akhbar
- Bigly Technologies
- Gurulnfoways

CASE STUDIES

PHP-FPM → Laravel Octane Migration

EdTech Platform

Tech Stack: Laravel Octane, Swoole, Redis, MySQL, PHP

Challenge: Slow responses (800ms avg), poor concurrency, and high CPU usage under PHP-FPM.

Solution: Migrated to Laravel Octane + Swoole with coroutine execution, process-level caching, and DB connection pooling.

Outcomes:

- Response times improved from 800ms → 40–60ms
- 5× higher concurrency handling
- 30–40% infra cost reduction

Monolith → Microservices Migration

EdTech & SaaS Platforms

Tech Stack: Kubernetes, Docker, Node.js, Go, Laravel, Jenkins

Challenge: Monolith causing scaling issues, slow deployments, and feature delivery delays.

Solution: Implemented strangler-fig migration to microservices with full observability on Kubernetes.

Outcomes:

- Improved fault isolation across services
- Clear ownership and autonomous deployments
- Independent database + service-level scaling

Real-time Observability Platform

Clients

Tech Stack: Grafana, ELK Stack, Loki, Tempo, Prometheus, Kubernetes

Challenge: Poor visibility in distributed systems; MTTR over 4 hours for critical issues.

Solution: Built end-to-end observability with tracing, centralized logging, metrics, and Grafana dashboards.

Outcomes:

- MTTR reduced from 4+ hours → under 30 minutes
- Achieved 99.99% availability
- Enabled proactive issue detection before user impact

Minimajs

minima-js.github.io

📅 Sep, 2023

📍 Pune

MinimaJS is a cutting-edge Node.js framework designed to empower developers to construct contemporary web applications with exceptional efficiency and elegance.

- Functional Programming
- TypeScript Foundation
- Modern JavaScript Adoption
- Direct Request Access

jiq (Javascript inline query)

md-adil.github.io/jiq

📅 Nov, 2020

📍 Pune

Use existing javascript knowledge to query or modify almost any type data, files and directory.

EDUCATION

SOFTWARE ENGINEERING

School of Internet

📅 2010 – Still Learning

BACHELOR OF COMMERCE

University of Delhi

📅 2010 – June 2013

OPEN SOURCE

I enjoy building tools that solve real developer problems — this mindset naturally led me to open-source. Notable projects include:

- Minimajs
- react-read-otp (1k weekly downloads)
- ebx

Over **15 Packages** on Npmjs

HOBBIES & INTERESTS

- **Programming as a Hobby** – I enjoy experimenting with new technologies, building side projects, and exploring open-source contributions beyond work.
- **Movies & Storytelling** – I appreciate well-crafted narratives, which also inspires my interest in user experience and product design.
- **Logic Puzzles Brain Teasers** – Keeps my problem-solving sharp and helps me think outside the box in debugging and systems design.
